THOMPSON'S TRUSSES, Office 13 Beekman street. About 30 of the first physicians and surgeons of New York have given their decided preference to this Truss, as you can graduate the pressure from one to fifty pounds on the upture, without a back tad, which does so much many to be some. A fair trus being the best test of its apportanty—it appoined and six days' trial given, and if it does not retain the upture, while performing every kind of exercise or coughing, and give perfort ense—in a word, if it is not satisfactory in very respect, the money in cheering returned, and this is the aly condition on which you should buy any Truss. A personent cure is easily effected, and warnated, if directions are ollowed.

These sending for this Truss need only mention the side ruptured and the measure round the hips, as they can graduate the pressure to suit their case. Sold wholesale and retail at 13 Beckman-street.

CLORE CLOCK STORE—J. R. MILLS & CO. Manu H. Latter and the YEAR CLOCKS would respectfully call the attention of the public to the unpenalleled improvement and decided advantages these Clocks have over all other time-keepers now in use. They are warranted to run one year with once winding, and to keep good time, and or now for sale at 1.9 Fulton-arrest, New-York.

The motion is produced by weights in the 29 day clocks, and by a sonit spring wound upon a fuses in the year clock. The power of the weight or entries is retaided in this clock, and made to retail regularity in its motion by the ingentious arrangement of the scients of a six motion by the ingentious arrangement of the scients and pendium. When you look at the clock, you because a git ball floor and a half inches in chameter, at the end of a mall steel red. If revolves those times and a helf one way, and the earne number of times the other. At the upper end of the roll is an ingenions and delected double lever movement, enching is the securement, which it catches and leaves without any sensible friction. The suring time reacts upon the ball, anded by its own gravity, and the rotary motion is continued, the economical controlled the controlled the scower, and each turn of the globe. The suring the required to the score of the score, which and on the threed of the score, the score of the globe arrangement incures, it is the control of the produces an exact movement of the weights to or from the center, which can be regulated to the semilate fraction of time,—The other two or in the control of the produc

This clock is not just out of leat easily—it requires no oil on the pullets.

The revolutions of the swing wheel are 60 times less, or in other words, is 60 rears in making as many revolutions as the 30 inch or second pendulum clock does in one year. In fact a weight of 1 pounds aceps in motion each part of the time and striking machinery for 64 weeks.

The hours are struck by means of a rotary hammer. The certificates of the American Institute show that in May, 1841, one of the twelvemonth clocks was placed with them, and that it has performed in all respects as was expected.
